

SPECIFICATION MANAGER

This helpful tool forms part of our Quality Management module and allows you to create and share specifications and manage supplier compliancy. The tool forms a single, central storage solution for all product specification requirements including: raw materials, ingredients, packaging and finished products. Keep all internal and external partners aware of any changes with automatic updates.

FEATURES INCLUDE:

- ✓ Create specification templates with a diverse range of field types including 360° rotatable images within our easy-to-use form builder.
- ✓ Ability to fill in templates internally and send to suppliers for sign off or assign empty templates for your supplier to complete with their product information and return to you for sign off.
- ✓ You can also upload specification files onto Foods Connected without creating templates.
- ✓ Assign approvers for newly created or updated specifications ensuring that the relevant people within your company approve changes before they are shared with suppliers.
- ✓ Set up reviewal periods to make sure that specifications are reviewed on a frequent basis, so you and your suppliers are always working from the most up-to-date information.
- ✓ Colour-coded summary of supplier specification sign offs enables you to quickly view which suppliers have outstanding sign offs.
- ✓ Full transparency and accountability for changes made to each specification with complete versioning control, ensuring both your company and your supplier are working from the same specification.
- ✓ Build detailed and customisable ingredients or finished pack specifications with recipe breakdowns, allergen and additive information, nutritional information, vulnerability assessments and auto-generated ingredient lists.
- ✓ Quickly communicate to your suppliers and company users any adjustments to specifications by creating specification exceptions which can be sent with an assigned time period and details to relevant suppliers.

Our Quality Management module with each of its tools interconnects and integrates seamlessly with our Supply Chain Management and Trading and Planning modules and are available on the Foods Connected single pane of glass platform.
